Metropolitan area NO₂ emissions dispersion calculations (Finnish meteorological institute) 2014 data

Kuva 6. Lentoliikenteen ja lentoasematoiminnan päästöjen aiheuttama typpidioksidin (NO₂) korkein vuosikesiarvopitoisuus (µg/m³).
9

Metropolitan area NO₂ emissions dispersion calculations (Finnish meteorological institute)

- The highest emissions of NO₂ from air traffic ja airport activities are outside the airport arealentoaseman about 25 % of the limit at the highest
- The effect of emissions is low over 5 km
- NO₂-concentration can be higher then the daily limit only on runways or close by
- Total emissions 2004 (up to 305 m) 276,2 t/a
- Total emissions 2014 (up to 305 m) 305,6 t/a

Thank you!
